

# Tufts REU

The Department of Biology at Tufts University offers a summer research program entitled “Integrative approaches to studying recognition systems in cells, organisms, and populations” in which 10 students will work closely on a collaborative, interdisciplinary project. Students in this 10-week program will receive a stipend of \$460 per week, a \$100 per week allotment for food, and on-campus housing.

The Department of Biology has a long-standing commitment to mentoring undergraduates in research, as well as a strong track record of highly productive interdisciplinary research collaborations. Science is a collaborative enterprise, requiring the combined expertise of researchers from diverse fields. The goals of this summer program are: to increase students’ proficiency in biological research and collaborative skills, to educate and inspire students toward future research careers, and to develop students’ ability to effectively communicate scientific results. In addition to research, students will participate in weekly discussions, seminars, field trips, and a symposium.

Students must be U.S. citizens or permanent residents who are enrolled in an accredited institution. Candidates should have a strong academic record. We especially encourage applications from women and minorities, as well as students from community colleges and other institutions that do not traditionally offer research opportunities.

**Applications available at:** <http://ase.tufts.edu/biology/undergrad/research/reu.asp>

**Target Due Date:** March 15

**Award Announcements:** April 1
