

**The Jeong-Long Lin Summer Research Fellowships
for Chemistry & Biochemistry Majors
Summer 2010**

Application due date: 15 March 2010

The Chemistry Department at Boston College has summer research fellowships available for college students finishing their sophomore and junior years who are under-represented in professions related to the chemical sciences. These under-represented groups include persons who, by reason of their culture, class, race, ethnicity, or background, would bring diversity to graduate studies in the field of chemistry. Applications from African Americans, Hispanic/Latino Americans, Native Americans, Pacific Islanders, and those whose experiences would contribute to the diversity of the field are expressly encouraged. The stipend is \$4,000 for 10 weeks during the summer with a flexible start date.

The program will provide an opportunity for undergraduate students to work in any of our faculty research laboratories along with Boston College undergraduate and graduate students and postdoctoral fellows. Applicants will be selected based on careful consideration of a variety of factors, including their academic record, experience, and personal background.

Professor Jeong-Long Lin, a visionary physical chemist, served as Chair of the Chemistry Department at Boston College during a pivotal period in the department's history. His leadership emphasized the high standards of scholarship that have sustained the department's excellence and continue to inspire us into the future.

To apply, please submit the following materials to the address below:

- a brief letter expressing your interest in the program
- your transcript
- a letter of recommendation from a Chemistry/Biochemistry professor

The Jeong-Long Lin Fellowship Program
